Comment on DOS-2015-0023-0001

Submitter Information

Name: Joseph Brackhan

General Comment

I wish to add my own comment and that is that I am quite outraged by your attempt to censor the internet.

Joseph Brackhan.

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

North Fort Myers, FL, 33917

General Comment

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Fred Penar

Comment on DOS-2015-0023-0001

Submitter Information

Name: George Anonymous

General Comment

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I urge you to entirely repeal these new regulations. Whether you like it or not, the First and Second Amendments are still the Supreme Laws of the land! The Constitution itself states that it is the SUPREME LAW and no other law can stand against it, and ALL STATES agree to abide by the U.S. Constitution when they join the Union. Stop acting unconstitutionally or you will eventually be prosecuted for violating the Supreme Law of the United States.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

These continuous waves of assaults on our Second Amendment rights are more than wearisome. I am sick and tired of the moronic gun-grabbing progressive movement (a gross misnomer) and its inability to understand the language in the U.S. Constitution which says, and I quote, ".....shall not be infringed.". The horse is DEAD, stop kicking it! STOP trying to circumvent The Constitution. It is the most perfect document ever written and, until the moronic progressives came upon the scene, has withstood the test of time! By the way, leave the First Amendment alone too!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the

State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) --

could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring,

not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D

printers.

I urge you to repeal these new regulations in their entirety.

To my knowledge you folks weren't elected by the citizens of this country to represent anyone. The

current administration
is on its way out. Perhaps you should keep that in mind as I don't believe you were promised a lifetime position either.

Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban or severely regulate 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you agree or not, the First and Second Amendments are still the law of the land and this rewrite appears to broadly cast an unconstitutional net of unlawful regulation (restriction of freedom of speech and severely limiting access to information pertinent to the safe operation and maintenance of firearms and ammunition as it relates to their lawful use congruent to our Second Amendment right) over millions of law abiding firearms owners in the United States.

Thank you for your consideration,

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

Tom Padwa

Submitter Information

Name: Mike Carmody

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put folks who violate this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Unconstitutional regulations are just that -- Unconstitutional. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. This is contrary to the First Amendment and out of scope for the State Department's authority.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers. This is extremist and IT issues are also out of scope for the ITR.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

I urge you to repeal these new regulations in their entirety. The First and Second Amendments to the Constitution of These United States of America are the law of the land. They do not require further definition and are not subject to alliteration or hyperbole.

The right to free speech in all forms across all methods of communication. "Congress shall make no law

[...] abridging the freedom of speech..." This is an absolute statement and requires no further definition. We The People have the right in our country to speak as we will about what we will. Rights shall not be infringed and it is not a privilege in our country.

The right to keep and bear arms is not a privilege, it is a guarantee. "[...] the right of the people to keep and bear arms shall not be infringed." This statement is exclusive of the pretext within the Second Amendment and it is what guarantees the right regardless of liberal redefinition of the language in which it was written. The prepositional phrase stands on its own. It matters not that the pretext phrase provides also the freedom to assemble a state or local militia which is also a guaranteed right belonging to the people of These United States.

You must stop trying to curtail the rights and liberties of the people of this country. You do not have the right or privilege, outside of a Convention of States as set forth in Article V of the Constitution, to rewrite, redefine, reinterpret, or revoke any right guaranteed by the Constitution. The President does not possess any such right or privilege either. It is, however, your sworn duty to block such attempts made by any governing body to limit, curtail, prohibit, or ban any such attempt within These United States.

"I, [name], do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God. 5 U.S.C. 3331

That is the oath of office for all federal employees not covered under other forms of the oath of office for various branches of the military or legislative branches of the federal government. You took that oath, now you must keep it.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

If your agency adopts any regulation which, in any way, infringes upon or chills the exercise by myself, or others, of their rights under the First and Second Administration I will urge my Senators and Member of Congress to cut funding of your agency necessary to implement the same as well as not funding salary and benefits of those responsible for adopting te same regulatios.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

There is no law within the 50 U.S. Codes that authorizes this action. If such unknown authority exists, then the proposed new regulations will need to include such authority.

Comment on DOS-2015-0023-0001

Submitter Information

Name: John Stull

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet, thus violating the first amendment to the Constitution of these United States of America.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by unelected bureaucrats as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I suggest that you do not have the authority to implement such broad-based regulation/treaty without a vote of the congress.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Obamas State Department Could Gag Firearms Communications over the Internet

Not a GOA member yet? You can join Gun Owners of America today for a mere \$20!

A rewrite of the State Departments arms control regulations could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The State Department is updating the International Traffic in Arms Regulations (ITAR) and has amended the existing regs to include making technical data available via a publicly available network (e.g., the

Internet).

This restriction on Internet speech is wholly new language and puts anyone who violates this provision in danger of facing decades in prison (up to 20 years) and massive fines (up to \$1 million).

The language is so broad that it could potentially include virtually any gun-related communication of a functional how to nature.

The language includes (1) non-automatic and semi-automatic firearms up to .50 caliber; (2) automatics up to .50 caliber; (3) other firearms of special military application; (4) shotguns with a barrel length less than 18 inches; and (5) components, parts, and ammunition for all of these.

In other words, electronically posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license.

And again, violators would potentially face significant criminal penalties.

Revised definitions could license (a.k.a., ban) 3-D printers

Another threat to gun rights is found in the revised definition of defense article, which has been redefined to be any item, software, or technical data....

So posting certain gun-related software to the Internet would first require a license -- and a huge license fee. While the term software is new, the State Department contends that this is a mere tweaking and represents no substantive change.

But if theres one unbreakable rule in politics, its that, when drafters take the time and effort to add a provision to the underlying text, it is never, never, ever without reason.

And if theres a second unbreakable rule, its that the drafters will inexorably lie and say theyre only codifying current law.

What software should we be concerned about? Well, to start with, 3-D printer programming almost certainly falls within this category and these regs seems to be an effort to outlaw this technology by executive fiat.

San Antonio gun author Nick Leghorn, who writes for The Truth About Guns, predicts an end to Encryption programs like TrueCrypt as well as 3D models of firearms....

There is much more thats involved with these regulations, and you can read about it in greater detail here.

ACTION: You can submit comments to the State Department in opposition to the proposed arms control regulations by going here. Simply cut-n-paste the text below into the online comment box. And if you wish to read the State Department regulations, you can do so here.

----- Pre-written letter to the Department of State -----

To whom it may concern:

Comment on DOS-2015-0023-0001

Submitter Information

Name: tom lish

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!
Please!!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Gary P. Woodruff

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Anonymous Anonymous

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Submitter Information

Name: Thomas Kurzej

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- would essentially outlaw all sorts of writing that is protected by both the first and second amendment -- making speech punishable by years in prison.

So posting information on virtually any firearm or ammunition could be defined by the any future administration as requiring, not only government permission, but potentially a government license. I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety.

General Comment

To appropriate females and males:

Regulations trying to trump the constitution are a waste of time and those employed to write them must be terminated from taxpayer funded employment.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

If you do not repeal these regulations, you are complicit in an ongoing (and often illegal) effort by this administration to rewrite the laws, and Constitution of the United States by executive fiat. This republic was designed by our founding fathers to be ruled by majority determination of the citizens - - not by the whim of a single man who holds himself above the law of the land. Return the decision making to the majority!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

If more time and money was spent on the kids and the elderly as they spend on taking away your 2nd amendment rights, we would have the smartest and healthiest people in the country.

Submitter Information

Name: Anonymous Anonymous

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

As an avid supporter of the U.S. Constitution and the Bill of Rights, I strongly oppose the rewrite of the State Departments international traffic in arms regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

Posting information on virtually any firearm or ammunition online could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties. Many avid gun enthusiasts enjoy openly discuss different types of firearms and ammunition, as some people enjoy the hobby of reloading ammunition.

This would also effect trade as this will put restrictions on venues such as YouTube and social media

sites like Facebook, Twitter, and Instagram and make it difficult for firearm accessory companies to advertise their products. The first amendment is definitely at stake as these discussions are not discussing Special Forces or SEAL training tactics, but the enjoyment of different types of firearms and ammunition among law abiding citizens for all lawful purposes. This regulation would make criminals of law abiding citizens, something we can do freely today would be a criminal offense after this type of regulation passes.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Roger Turner

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Roger Turner

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Obamas State Department Could Gag Firearms Communications over the Internet

Created: Friday, 12 June 2015

Written by Gun Owners of America

Not a GOA member yet? You can join Gun Owners of America today for a mere \$20!

A rewrite of the State Departments arms control regulations could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The State Department is updating the International Traffic in Arms Regulations (ITAR) and has amended the existing regs to include making technical data available via a publicly available network (e.g., the Internet).

This restriction on Internet speech is wholly new language and puts anyone who violates this provision in danger of facing decades in prison (up to 20 years) and massive fines (up to \$1 million).

The language is so broad that it could potentially include virtually any gun-related communication of a functional how to nature.

The language includes (1) non-automatic and semi-automatic firearms up to .50 caliber; (2) automatics up to .50 caliber; (3) other firearms of special military application; (4) shotguns with a barrel length less than 18 inches; and (5) components, parts, and ammunition for all of these.

In other words, electronically posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license.

And again, violators would potentially face significant criminal penalties.

Revised definitions could license (a.k.a., ban) 3-D printers

Another threat to gun rights is found in the revised definition of defense article, which has been redefined to be any item, software, or technical data....

So posting certain gun-related software to the Internet would first require a license -- and a huge license fee. While the term software is new, the State Department contends that this is a mere tweaking and represents no substantive change.

But if theres one unbreakable rule in politics, its that, when drafters take the time and effort to add a provision to the underlying text, it is never, never, ever without reason.

And if theres a second unbreakable rule, its that the drafters will inexorably lie and say theyre only codifying current law.

What software should we be concerned about? Well, to start with, 3-D printer programming almost certainly falls within this category and these regs seems to be an effort to outlaw this technology by executive fiat.

San Antonio gun author Nick Leghorn, who writes for The Truth About Guns, predicts an end to Encryption programs like TrueCrypt as well as 3D models of firearms....

There is much more thats involved with these regulations, and you can read about it in greater detail here.

ACTION: You can submit comments to the State Department in opposition to the proposed arms control regulations by going here. Simply cut-n-paste the text below into the online comment box. And if you wish to read the State Department regulations, you can do so here.

----- Pre-written letter to the Department of State -----

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

General Comment

To Anti-Constitutional Bureaucrats Rewriting ITAR:

I am absolutely appalled at and strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I am fed up with this kind of executive overreach and urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land! You do remember those, right?

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Rick Thorne

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I am aware that the Chinese government has issued an edict to President Obama, demanding that American citizens be disarmed before millions of communist Chinese citizens invade our country to stay. Apparently that's part of the secret "debtor-nation deal" which Barack Obama is negotiating with China. But the American people won't permit such a deal, nor will the American people permit Barack Obama to undermine our 2nd Amendment Rights, nor our First Amendment Rights, both of which are guaranteed by the U.S. Constitution! Like it or not, both are still the law of the land!

I think it is high time that you feds started respecting the United States Constitution! The first and second amendments were written in unequivocal language for a reason. To prevent people like the drafters of these "regulations" from running roughshod over our cherished fundamental rights. Behave yourself or you may likely find yourselves out of employment.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Jack Dumm

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

Pistols should not be required to have a permit for ownership in New York State ;shurikens and numchuks and other such Kenpo(Kungfu) Weapons or Ninjutsu should be legal in new York State ,nor a license for an Airgun in New York City should be required,

In light of Elvis Presley ,Annie Oakley, and Bruce Lee,Guns,moreover,should be cheaper and able to be mailed legally without the bullying of the Federals, Pro-Heterosexual too although with a LOVE for

everybody.

General Comment

To whom it may concern:

I have strong concerns about the rewrite/additions/changes of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

It seems that at some later point in time, these changes could be interpreted in such a way that posting information on virtually any firearm or ammunition could be defined by the Obama (or later) administration(s) as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also am very concerned about the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to carefully consider the short- and long-term repercussions of these changes, especially as administrations change and time passes without close examination, and repeal these new regulations now in their entirety before their terrible implications can be realized. Whether this fact is convenient and expedient or not, the First and Second Amendments are still the law of the land; we must exercise all diligence to preserve their integrity and not weaken their authority with laws and regulations such as these.

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!
